

## Web Filter 4.1.10

M86 Security is pleased to announce the release of Web Filter software version 4.1.10. This software release requires an M86 Web Filter appliance running Web Filter software version 4.1.00 or later.

NOTE: M86 recommends applying this software update during periods of low network usage, as it will have a severe impact on the server resulting in a decreased filtering performance for approximately five minutes.

### FREQUENTLY ASKED QUESTIONS

**Q.** Which versions of Java are supported in this release?

**A.** This release supports Java 1.6.0\_17 through 1.6.0\_21. Versions 1.6.0\_22 and higher are incompatible with this software upgrade.

**Q.** If the synchronization feature is used in our environment, do all Web Filter and Web Filtering and Reporting Suite (WFR) appliances need to be running the same software version?

**A.** In a synchronization environment, all Web Filters must use the same software version. If this 4.1.10 software release is installed on the source Web Filter, target Web Filters must also be upgraded to 4.1.10. If a target WFR is used it must be upgraded to 3.0.10, since that WFR software release contains Web Filter software version 4.1.10.

NOTE: Due to hardware limitations in older Web Filter and IR models, if the 4.1.10 software upgrade is downloaded to that server, it cannot be applied. The server must be upgraded to a later model in order to apply the software update.

### ENHANCEMENTS AND RESOLVED ISSUES

#### HTTP and HTTPS slippage resolutions

A number of issues regarding end user access to blocked Web sites have been resolved in this release, including end user access to Facebook.com.
