

Web Filtering and Reporting Suite 3.0.10

M86 Security is pleased to announce the release of Web Filtering and Reporting Suite software version 3.0.10. This software release requires an M86 WFR appliance running software version 3.0.00 or later, will upgrade the M86 Web Filter software version to 4.1.10.

NOTE: M86 recommends applying this software update during periods of low network usage, as it will have a severe impact on the server resulting in a decreased filtering performance for approximately five minutes.

FREQUENTLY ASKED QUESTIONS

Q. Which versions of Java are supported in this release?

A. This release supports Java 1.6.0_17 through 1.6.0_21. Versions 1.6.0_22 and higher are incompatible with this software upgrade.

Q. If the synchronization feature is used in our environment, do all WFRs and Web Filters need to be running the same software version?

A. In a synchronization environment, all WFRs and Web Filters must use the same software version. If this 3.0.10 software release is installed on the source WFR Web Filter, all target Web Filters must be upgraded to 4.1.10, which is the compatible software version for WFR 3.0.00.

NOTE: Due to hardware limitations in older Web Filter and IR models, if the 4.1.10 software upgrade is downloaded to that server, it cannot be applied. The server must be upgraded to a later model in order to apply the software update.

ENHANCEMENTS AND RESOLVED ISSUES

HTTP and HTTPS slippage resolutions

A number of issues regarding end user access to blocked Web sites have been resolved in this release, including end user access to Facebook.com.
