What's New in the ER Server/Web Client '4.0.20' Version

This Enterprise Reporter Server software release upgrades version 4.0.10 or higher to 4.0.20. When applying this software update, there will be a momentary impact on filtering and reporting.

NOTE: Once this software update is applied, it cannot be undone.

Enhancements:

- The interface can now display text in Simplified or Traditional Chinese

- Clicking a menu title in the Web Client's navigational panel now only collapses/expands the menu, and no longer launches a report in the view panel

- The new "Excel (English)" option is now available for exporting a Web Client report in an Excel spreadsheet format. In conjunction with this option, the option formerly named "Microsoft Excel" has been renamed "Excel (Chinese)," and supports the Chinese language format.

- Fixes were made to resolve a log discrepancy issue

- The R3000IR Administrator User Interface is now compatible with Linux 2.6 OS
